Education

KAIST

Mar 2016 - Feb 2021 (expected graduation) | Daejeon, South Korea

Co-majored Bio & Brain Engineering and Computer Science, cumulative GPA 4.07/4.3

Technical University of Munich

Apr 2019 - Aug 2019 | Munich, Bavaria, Germany

Long-term TUMexchange in Informatics

UC Berkeley

Jul 2016 - Aug 2016 | Berkeley, California, US

Summer session student

Publications

Spontaneous Retinal Waves Generate Long-range Horizontal Connectivity in Visual Cortex

Jinwoo Kim, Min Song, Se-Bum Paik

Under review

Experience

Undergraduate Researcher

Dec 2019 - Now | Vision and Learning Lab @ KAIST

Currently carrying out a computer vision research on hierarchy-aware scene synthesis by deep generative modeling.

Undergraduate Researcher

Jul 2018 - Dec 2019 | Visual System Neural Network Lab @ KAIST

Conducted computational neuroscience research (see publications) as a co-first author; contributed to conceptualization, methodology, software, writing, and visualization.

Research Intern

Sep 2017 - Sep 2018 | Center for Cognition and Sociality @ IBS

Conducted mouse behavioral experiments, implemented GUI of data acquisition software and designed a unbiased task sequence generation algorithm.

Projects

Zero-shot Korean Voice Cloning

Contributor.

Applied latent autoencoder and transfer learning to solve the zero-shot Korean TTS problem by speaker identity conditioning; conducted as a course term project and obtained positive initial results.

Naver AI Hackathon 2019 - Speech

Contributor.

Ranked 22/100 in Korean speech recognition task by leveraging the following techniques on top of baseline LSTM; multihead attention, silence trimming, SpecAugment, scheduled sampling, LR decay, shallow LM fusion, and beam search.

Society for Neuroscience 2019

Author and presenter.

Submitted abstract and made a poster presentation about a developmental theory of functional circuits in the primary visual cortex driven by inherent retinal structure before visual experience.

Comp Neuro Winter School 2019, Korean Society for Computational Neuroscience

Contributor and presenter.

Participated as a student, awarded 1st prize in nociceptive neural spike classification task.

Skills

C1 level English

TOEIC 970/990 (Feb 2019), TOEFL 105/120 (Sep 2017)

Programming Languages

Python, Matlab, C++, R

Honors

National Science & Technology Scholarship

Mar 2018 - Now

KAIST Alumni Scholarship

Mar 2017 - Now

KAIST Presidential Fellowship

Mar 2016 - Now

Dean's List, School of Engineering

Spring 2018

Dean's List, School of Freshmen

Spring 2016
