## Research Interest

My focus is in making deep learning models generalize better out of their training data so that they can be used to solve challenging problems, such as those in scientific domains. I have been studying this primarily from the viewpoint of invariances, focusing on all-purpose deep neural networks that can reliably reason upon novel transformed inputs. I often use tools from theories of graphs, manifolds, (semi)groups and categories, and Markov processes such as random walks, diffusions and flows.
